

1. Variable, expression, and statement

Jin Wang, MSIS, Rutgers

Fall 2023

Table of Contents

1. First python program for BAIT, Arithmetic operators
 2. Assignment statement and variables
 3. Interactive mode and script mode
 4. Values and types
 5. Strings
- Summing up

1. First python program for BAIT, Arithmetic operators

Python for Arithmetic

- +
- -
- *
- /
- **
- %

2. Assignment statement and variables

Assignment statements

Variable names

- letters
- letters and numbers
- underscore character

3. Interactive mode and script mode

Interactive

Script mode

- path problem

4. Values and types

- int
- float
- string

5. Strings

- Values in Quotation marks
- Small problem with quotation marks
- String concatenation
- String Repetition
- String Built-in methods
 - <https://docs.python.org/3/library/stdtypes.html#string-methods>

Summing up

- Arithmetic operators
- Variables
- Interactive mode, terminal
- Script model, `.py` file
- Types, int, float, and string
- String concatenation and repetition
